

How to	Source - Prepare Precipitation data for Source RO
Description	Select short term forecast and combine with observed and zeros
Comments	Please be aware that the screenshots may deviate slightly from the application
version	2016-01

Precipitation data are location based time series, created by merging 3 types of data:

- Observations (OPO)
- Short term forecast, with user defined source selection in modifier display from:
 - ACCESS-G
 - ACCESS-R
 - ADFD
 - PME
 - None
- Long term forecast: no rain

To select the short term forecast:

0. Complete the OPO observed Flow for all locations (elsewhere in Workflows display)
1. Run the workflow, to process the gridded rainfall products to the Source locations
2. Select the source for the gridded rainfall in the Modifiers display
3. *Apply and Re-run*
