

How to	URBS - Ensemble Rainfall Comparison
Description	Compare the effects of the available rainfall forecasts
Comments	<i>italic</i> phrases taken from the book "Flood Forecasting: a Global Perspective". Please be aware that the screenshots may deviate slightly from the application
version	2016-01

The Ensemble Comparison Run compares the Current Policy and What-if Scenario against the available Rainfall NWP products like ACCESSR and ADFD. It is an important tool to quickly compare the hydrological impact of different forecast rainfall policies.

Note: In the ensemble run only the Hume Release Forecast is considered, the What-If Hume Release Scenario is not.
