Breaches (aka threshold crossings) are all summed for quarterly and yearly reports. The operators can exclude crossings from this count. For example, once a breach has started, subsequent threshold crossings can be excluded (see [HowTo_ThresholdCrossings_Exclusion](#)). This how to describes how to generate these quarterly and annual reports.

1. In Workflows > Reporting > Export Quarterly report and run the appropriate task.
2. View the results in the internal web viewer. The html files are written locally to Export/Reports folder, from where they can copied into the overall report.

Note that if all but one threshold crossing in that period is excluded from the count, this will be reflected in the summary report (example for H at 409030 GULPA, see insert).
